

Kevin,

I believe this recycling link would work for any aerosol can - especially if the likes of Home Depot and others reference it.

Regarding communicating this link to customers, I am sure that is fine to do. For more public channels, Facebook and Twitter, I have added Lindsay, so she can provide her perspective.

Thank you,

Bo Kessing

Subject: Sharing aerosol can recycling link

Hi Bo,

We have received a few comments from a customer requesting information about recycling our aerosol cans. I know that the nozzles and caps are recyclable, however, the cans themselves will be handled differently county to county. I found this website with information about recycling aerosol cans, and it also has a helpful zip code locator for aerosol recycling:

<https://earth911.com/recycling-guide/how-to-recycle-aerosol-cans/>

My question is whether this information pertains to our spray paints, and if you think it would be appropriate to share this website link with customers, especially on public channels such as facebook and twitter. I've seen Home Depot and other manufacturers provide this link on their websites as well.

Thank you,

Kevin Fisher
